

How to get rid of Algae

1. Test water. Balance alkalinity and pH if needed.
2. Turn pump off. Switch filter setting to “Backwash”. Turn pump on, backwash thoroughly (5 minutes), turn pump off.
3. Switch filter setting to “circulate” or “whirlpool”, turn pump on.
4. Add 20 Liters of liquid chlorine or 2kg of Pool Shock.
5. Brush pool walls, floor, etc.
6. Continue to circulate pool overnight.
7. The next day, add 1 bottle of concentrated algaecide. (At least 40%)
8. Turn pump off. Switch filter to “filter” setting.
9. Ensure chlorine level remains adequate, add clarifier if needed.
